Illinois Institute of Technology
Jithin Joyson

Spring 2019: Homework 0

1 Exercises

1.1 I hope to learn the innerworkings of how data is filtered through the use of different algorithms. I have taken a Machine Learning course which explained about the math aspects of different models but am lacking in practical use cases of such models that are a result of processed data. I am also curious on how the use R and the different analysis that can be done with R verses Python (the ML class was taught in python).
